

blur the line between a person's consciousness and external technological inputs.

### **The Right to Free-Will:**

Individuals should have ultimate control over their own decision making, without unknown manipulation from external neurotechnologies.

### **The Right to Mental Privacy:**

Any data obtained from measuring neural activity ("NeuroData") should be kept private. Moreover, the sale, commercial transfer, and use of neural data should be strictly regulated.

### **The Right to Equal Access to Mental Augmentation:**

There should be established guidelines at both international and national levels regulating the development and applications of mental-enhancement neurotechnologies. These guidelines should be based on the principle of justice and guarantee equality of access to all citizens.

### **The Right to Protection from Algorithmic Bias:**

Countermeasures to combat bias should be the norm for machine learning. Algorithm design should include input from user groups to
